Re: Leadership roles in electrical construction and commissioning

Dear Hiring Team,

I lead and coordinate the engineers, designers, trades, contractors and operators who deliver the electrical package. I own the client and stakeholder side, and I bring 35 years of real-world design and installation experience to the work. That is the role I do best. My CV is attached.

I have 35 years in electrical and ICT construction, from apprentice through Senior Superintendent to Senior Project Manager. My credentials are Red Seal Class A Master Electrician, FSR Class A (BC, unlimited), BICSI RCDD and CIQS Construction Estimator Certified (CEC).

I spent 17 years at Bridge Electric, progressing from foreman to Senior Superintendent with crews of up to 60, including the CA$24M electrical project at Fairmont Pacific Rim. I led and coordinated manufacturer specialists, testing agencies and trades through L1 to L5 and integrated systems testing. My data centre work includes the data centre inside Shaw Tower in Vancouver, a smaller-scale critical power installation with redundant 1 MVA transformers at 600 V, and the data centre inside the Stream International call centre. I then spent nearly 10 years as Senior Project Manager at Nemetz (S/A) & Associates, an electrical engineering firm in Vancouver, bringing that field and commissioning experience into design review and client delivery.

I live in Dubai, where I run Red Seal Technical Services, and I am currently reviewing an 80 MW data centre in Alberta for a client. I am a UAE resident and available immediately. I would welcome a conversation about leadership roles with contractors, consultants, developers, and data centre or MEP firms in the UAE and GCC.

Kind regards,

Karl Stewart Nylund
